SOFTWARE ENGINEERING · BUILD, THEN DEMO

This isn't an assignment. It's the **job**.

The exact work you'll do inside the team — building real automation that companies pay for. Ship it, then demo it live.

● Sourcing → Mailing

● Zero humans in the loop

01

It's the real job

Build a fully automated cold-outreach pipeline, sourcing through mailing.

02

Yours to keep

Even if you aren't hired, you walk away with a working, end-to-end product for your portfolio.

→

One input, then hands off

A human types a single `company.domain`. The system does everything after that, on its own — demoed live in the interview.

One input. Four stages. A full outreach engine.

HOW IT RUNS, STAGE BY STAGE

- IN
- A human provides one **seed domain** — a company you already know is a strong customer. That single string is the only manual input the system ever receives.
- 01
- Ocean.io** expands the seed into a list of **lookalike companies** — similar firmographics, size, and market. Output: a clean list of company domains.
- 02
- Prospeo** takes each company domain and surfaces the **decision-makers** — C-suite and VP-level — together with their LinkedIn profile URLs.
- 03
- Eazyreach** resolves each LinkedIn profile into a **verified work email**, so every address you mail is real and deliverable.
- 04
- Brevo** sends each contact a **personalized outreach email**. The copy and pitch are yours; the pipeline only has to fire them on its own.
-
- Every stage's output is the next stage's input. **No human touches the data in between** — that hand-off-free chain is the entire point.

WHAT "DONE" LOOKS LIKE

- >
- Build it as a **single command-line program** that runs all four stages end to end.
- >
- Each stage feeds the next automatically — **no copy-paste, no manual handoffs**.
- >
- Half the job is **reading each tool's API docs** — auth, endpoints, request/response shapes, and limits all live there.
- >
- The **outreach email copy is entirely yours**. We only care that the pipeline sends it automatically.
- ★
- A sensible build adds **one safety checkpoint** — show a summary before the emails actually fire.

What we look for, and the live demo.

EVALUATION CRITERIA

- ✓ **It runs end to end**
One domain in, all four stages fire — zero manual steps after the input.
- ✓ **Integrations done right**
Auth, pagination, and error handling wired correctly against each tool's real API.
- ✓ **Clean, modular code**
One stage is one clear unit — readable, separable, and easy to extend.
- ✓ **Resilient to messy data**
Missing contacts, rate limits, and partial failures don't crash the run.
- ✓ **Good judgment**
A safety checkpoint before emails fire, plus sensible defaults throughout.
- ★ **Bonus • sharp email copy**
Personalized outreach you'd actually open beats a generic blast.

IN THE INTERVIEW

- 1 **Run it live.** Enter a domain and we watch the pipeline execute end to end.
- 2 **Walk the code.** Talk us through your structure and the API decisions you made.
- 3 **Edge cases.** Expect questions on rate limits, de-duplication, and undeliverable emails.
- 4 **Live tweak.** We may ask you to change or extend a stage on the spot.
- 5 **Be honest.** A working slice you can explain beats a broken whole you can't.

Get your domain & accounts.

STEP 01

Get a domain first

- **Free:** claim one via the GitHub Student Developer Pack.
- **No student pack?** Buy the cheapest domain on Namecheap.
- We reimburse Namecheap — submit a payment screenshot + your UPI ID in the form.

The domain is the **only** paid item. Everything else is free.

STEP 02

Create accounts

Namecheap

Ocean.io

Prospero

Eazyreach

Brevo

- All free, APIs included. Namecheap is the only paid one — and it's reimbursed.
- **Eazyreach credits are on us** — create the account, send us your details, we top it up.

STEP 03

Order matters

- Ocean.io needs a **company email** to sign up.
- No domain → no company email → **can't create Ocean.io.**
- So the domain genuinely has to come first. Don't skip ahead.

THE GOTCHA

Domain first

01

Get domain

Student Pack or Namecheap

→

02

Company email

you@yourdomain

→

03

Sign up Ocean.io

using that company email

→

04

Other accounts

Prospero, Eazyreach, Brevo

Everything you need.
